

Oiles Fiberflon TR Multi-layer polytetrafluoroethylene plastic bearings

RoHS2 **ELV** **Lead Free**

Feature

- Serviceable without the need for lubrication. Has superior wear resistance.
- Demonstrates the low coefficient of friction of the PTFE plastic as is.
- Offers superior performance under high-load, low-speed conditions.
- The sliding surface is made of cross-woven fabric hardened firmly with plastic to improve cold flow, disadvantage of PTFE, remarkably.
- Has superior heat, cold and chemical resistance.
- Backing materials are selectable according to applications.
- May be used in water and seawater.

The values in parentheses are static bearing pressures, which are the bearing pressures in applications with no motion or very small motion ($\leq 0.0017\text{m/s}$ [0.1m/min]).

Feature

- This product can be used in air, water or seawater.
- Demonstrates superior wear resistance under micro-motion.
- Thanks to the dual structure of the sliding layer and backing material (FRP:glass fiber), this product offers load bearing characteristics equivalent to those of metal bearings.
- Easy dimensional setting due to a low swelling rate.
- Machining on the inner surface is possible.
